A Family of Heating & Cooling Brands.

While you are enjoying your cozy comfort in the winter, you may be wondering about the best way to cool your home in the summer. As an expert in heating and cooling solutions, ECR knows that the best option available for homeowners with boiler heat is ductless air conditioning. ECR has been manufacturing EMI ductless air conditioning products for over 30 years and has been delivering these advantages over window units or central A/C:

- **Multiple Zones:**

Much like the zoning associated with your boiler (the ability to heat different rooms at different temperatures), your ductless air conditioning system will allow each area of your home to be individually controlled. This saves energy and utility dollars by controlling the temperature as you wish.

- **Quiet operation and convenience:**

Window units can be loud and can emit noise levels as high as 65db during operation. Ductless air conditioners can reduce that by as much as 35%. Don't go through the trouble of installing and removing your window units each season.

- **Efficiency:**

Ductless air conditioning systems are typically 30% more efficient than window units purchased today.

- **Security:**

Window air conditioners can create an entry way into your home for burglars. Ductless air conditioning systems eliminate entry points into your home.

- **Easy Installation:**

These systems can be installed by an HVAC professional in a single day and all connections are hidden from view.

- **Aesthetics:**

Instead of multiple air conditioners hanging outside of your home's windows, ductless air conditioning systems offer one outdoor unit (condenser) which sits at the ground level and can be hidden behind shrubbery and the air handler is indoors.

- **Increased Home Value:**

Ductless air conditioning is an asset that brings value to your home. This information can be noted by an appraiser, and increase the value should you ever sell your home.

EMI's Enviroair line of ductless systems has an array of cooling solutions for every situation. Whether you want to cool a few rooms or your entire house, an EMI EnviroAir ductless system can do the job and is the perfect pairing for boiler heated homes. Enviroair systems offer smart cooling for the environment and your wallet. To find out more about how to cool your home with Enviroair ductless air conditioning go to www.enviromaster.com, or call us at (800) 325-5479.
