

UPDATED LEAD TIME 7/22/24

To Our Valued Customers,

As we enter into the 2023 / 2024 heating season we want to provide you with our current lead time status as the industry, along with global markets, remain greatly impacted by supply chain disruptions. We understand you need the most up to date information available to properly plan your purchases to satisfy your customer's needs. We are providing you with the lead times based upon what information we have received from our suppliers regarding receipt of the needed components.

In today's environment lead times are fluid and are subject to change, though we believe these projected timelines, based on information we have received from our suppliers to be accurate, or close to it.

ECR will be posting this document to our Customer Portal and will be updating it on a weekly basis. Please periodically visit the portal to confirm approximate lead times.
