

PRODUCT INFORMATION BULLETIN

DATE: June 18, 2003

TO: All Dunkirk Boiler Representatives

FROM: Technical Service Department

SUBJECT: Dunkirk "EV" Series Boiler

We would like to notify you of an upcoming change to our line of boilers. Listed below is a change that will take place over the next few months. If after you review this change you should have any questions, please feel free to contact the factory at (315) 797-1310.

Oil Burner Change:

The Beckett SMG oil burner, which is currently used on the Dunkirk "EV" model DPFO-6T (w/ 2.10 firing rate), DPFO-7 (w/ 2.35 firing rate), DPFO-8T (w/ 2.75 firing rate), and DPFO-9 (w/ 3.00 firing rate), is being replaced by the Beckett CF375 oil burner. The CF375 is a relatively new offering in the Beckett line of CF burners.

The DPFO Dunkirk boilers listed above with firing rates between 2.10 and 3.00 fit comfortably at the midpoint of the CF375 capacity. This makes the CF375 well suited for use with these applications.

Enclosed is a copy of the Beckett CF375 operations manual along with a revised specifications sheet for the "EV" series boiler.
